

St. Croix Electric Cooperative "Cash for Conserving" 2010

Rebate Form for Site Assessment - Solar water heating and Photovoltaic

100 watts to 2000 watts - Limit one per account per year

St. Croix Electric Cooperative recommends having an independent certified site assessor (someone not involved in selling wind generating equipment) visit to determine if your site is a good location for a wind electric generating system. The certified site assessor can provide in-depth information about your specific location.

Costs for site assessments vary depending on the type and complexity of the renewable energy system. St. Croix Electric Cooperative will provide eligible customers with up to a 50% discount on the cost of a residential site assessment (\$300.00 Maximum).

Please fill out the information below to receive your "Cash for Conserving" rebate for your site survey.

Customer Name _____

Address _____
